dealer inquiries welcome 1-800-563-2974

E•Zyme is a readily biodegradable and environmentally friendly blend of enzymes and non-toxic detergents. It effectively destroys offensive odours, while lifting away surface dirt and grime. Enzymes are non-toxic, non-irritating, non-gaseous, non-flammable, non-pathogenic, and non-hazardous.

Why does your stuff stink???

The odour is most often caused by bacteria, a living organism. Bacteria grows by eating organic matter in dark, damp, warm areas, which perfectly describes shoes, upholstery, carpets, couches, athletic equipment, pet beds and more.

So, what do you do? To effectively neutralize the odour and not just cover it up, you must eliminate the bacteria causing the odour. **E•Zyme** delivers targeted enzymes, which breaks down the organic matter leaving no food for the bacteria to eat, so it dies. No more smell!

Cleaner is healthier. Keeping your stuff free from potentially harmful bacteria may help reduce the health risks of infection, dermal irritation and allergic responses.

E•Zyme performs its deodorizing function on contact, and works best while the surface is moist.

When eliminating extra-strong odours, (like hockey gloves etc), you simply reapply, to be sure all the stinky bacteria is destroyed.

Keep your stuff smelling great!
