

Outdoor Cleaners

Car & Vinyl Cleaner

This highly concentrated cleaner can be used on cars, boats, patio furniture and for tough jobs on all outdoor surfaces. Cuts grime and greasy dirt without danger to the environment.

Products used outdoors go directly into the ecosystem without septic or sewage treatment. It is critical to choose an environmentally responsible product for out door use.

- Non-Toxic, Hypoallergenic
- Contains no bleaches or harsh chemical ingredients
- Gentle on skin; non-corrosive
- Concentrated; use less, save more!
- Biodegradable with organic ingredients
- Wilderness safe

An ideal cleaner for the car enthusiast but just as at home with outdoor plastic or vinyl furniture. It even works on your fireplace doors and Corning Ware type glass baking dishes. Use straight with a cloth to remove grime.

Also works to remove mildew around vinyl windows!

Safe to use around young children as well as those with environmental sensitivities.

Ammonia Free...The danger in using products with ammonia is that we may unknowingly mix ammonia with chlorine or other acid (like vinegar) since many cleaners do not give a complete list of ingredients. Ammonia + Acid = deadly fumes.

Sodium Citrate, the principal surfactant/dirt-suspending agent in CAERAN Car & Vinyl Cleaner, has been shown to be 99% biodegraded in only 2 hours!

At CAERAN, our mandate is to provide superior quality nature friendly products, while giving the consumer complete information on the ingredients and action of those ingredients.

Being a careful consumer: It's all about informed decisions.

Car & Vinyl Cleaner

Ingredients

Sodium hydroxide Derived from sodium chloride (sea salt). Also known as Lye, Sodium Hydroxide is a very strong alkaline required in making soap. Although it is too strong at the raw ingredient concentration, once in formulation where it is used at very mild levels, it provides the 'soap' cleaning action, and gives function and effectiveness to the final product. Fully biodegradable and causes no environmental harm.

Water glass (sodium metasilicate): produced from high silicate sand and soda ash. Water glass neutralizes acidic soil, emulsifies oil, breaks up dirt, softens water, inhibits corrosion of washing machines, and helps to keep dirt from settling back on clothes.

Sodium bicarbonate (baking soda): This alkali is found in many food products including baking powder and ice cream, and in skin-soothing products, etc.

Citric acid: Derived from citrus and is used as a natural preservative.

Linear alcohol ethoxylate: An emulsifier and surfactant (wetting agent). Decreases the surface tension of water, allowing the cleaning ingredients to penetrate and remove the dirt. Breaks down into harmless carbon dioxide and water. No toxic effects on aquatic life from mosquito larvae to guppies, snails, etc.

Sodium Xylene Sulphonate: This biodegradable ingredient is used mainly to keep together the components in a concentrated liquid cleaner.

Product Information

- Concentrated; use less, save more!
- No irritating chemical residue
- Biodegradable; ideal for outdoor cleaning jobs
- Perfect for cleaning cars, boats, patio furniture and vinyl
- Gentle on hands; non-corrosive
- Effectively and safely cuts through greasy grimy dirt and film.

EnviroFacts

- Biodegradable - No Toxic Effects
- Concentrated - Less Packaging
- Recyclable Packaging
- Non-Corrosive, Non-Abrasive
- Non-Toxic, Hypoallergenic
- Contains no Ammonia
- No Artificial Fragrances
- Environmentally Safe
- Animal Test Free
- Remember the 4 R's:
 - 1) Reduce
 - 2) Re-use
 - 3) Recycle
 - 4) Responsibility
- Buying big saves money and the environment. It takes less energy to produce one large container than several small ones - and less energy to recycle. With CAERAN you save money, and the environment, when you purchase larger sizes.
