Why does sports gear stink???

Bacteria grow in dark, damp, warm areas, which perfectly describes gloves, skates, shoes, helmets, padding and other athletic equipment.

Odor is caused by bacteria, a living organism. To effectively neutralize the odor and not just cover it up, you must eliminate the bacteria causing the odor.

E•Zyme Sport is a completely biodegradable and environmentally friendly blend of enzymes and powerful detergents, not only effectively destroying offensive odours, but lifting away dirt, grime and stains.

Clean equipment is healthier! Keeping your sports equipment free from potentially harmful bacteria reduces the risk of cuts, scrapes and open blisters getting infected and causing additional injury.

Enzymes are non-toxic, non-irritating, non-gaseous, non-flammable, non-pathogenic, and non-hazardous.

E•Zyme Sport performs its deodorizing function on contact. When eliminating extra-strong odours, like hockey gloves etc, you will need to reapply to allow all the bacteria to be destroyed.

If there is still a stink?... there is still bacteria.
