

CAERAN Deodorant Refill Cones

CAERAN has created not only a safer deodorant, free of aluminum chlorhydrate, artificial scents/colour and formaldehyde, but we've also created the first re-fillable product.

Always conscious of our waste/packaging impact, CAERAN has designed a deodorant refill. It's pretty clever really.

1. **MELT:** The solid deodorant, contained in a simple recyclable CONE shaped bag, is melted in a pot on low until liquid (only takes a few minutes).
2. **PREP:** Be sure the base of your original applicator is screwed all the way down to the bottom. (Sometimes this base or CUP-like piece comes out, so BE SURE it is in place before attempting to refill. Otherwise, your refill liquid will simply pour straight through the applicator onto your table!).
3. **CLIP:** Hold the REFILL CONE with an oven-mitt-hand, point UP, and clip the tip with scissors, keeping the opening pinched shut with your thumb and finger.
4. **POUR:** Empty the liquid deodorant into your prepped applicator and wait 15 minutes or so to re-harden.

It's simple and environmentally sound!

By refilling your applicator, you will help to save tons of plastic from entering either the landfills or the recycling system.

Our formulation is ideal for sensitive skin types and comes in completely unscented or two pure essential oil varieties. Teatree/Lemongrass, or Lavender.
No artificial fragrances or perfumes, just pure therapeutic grade essential oils.
